How to play this Minesweeper Game
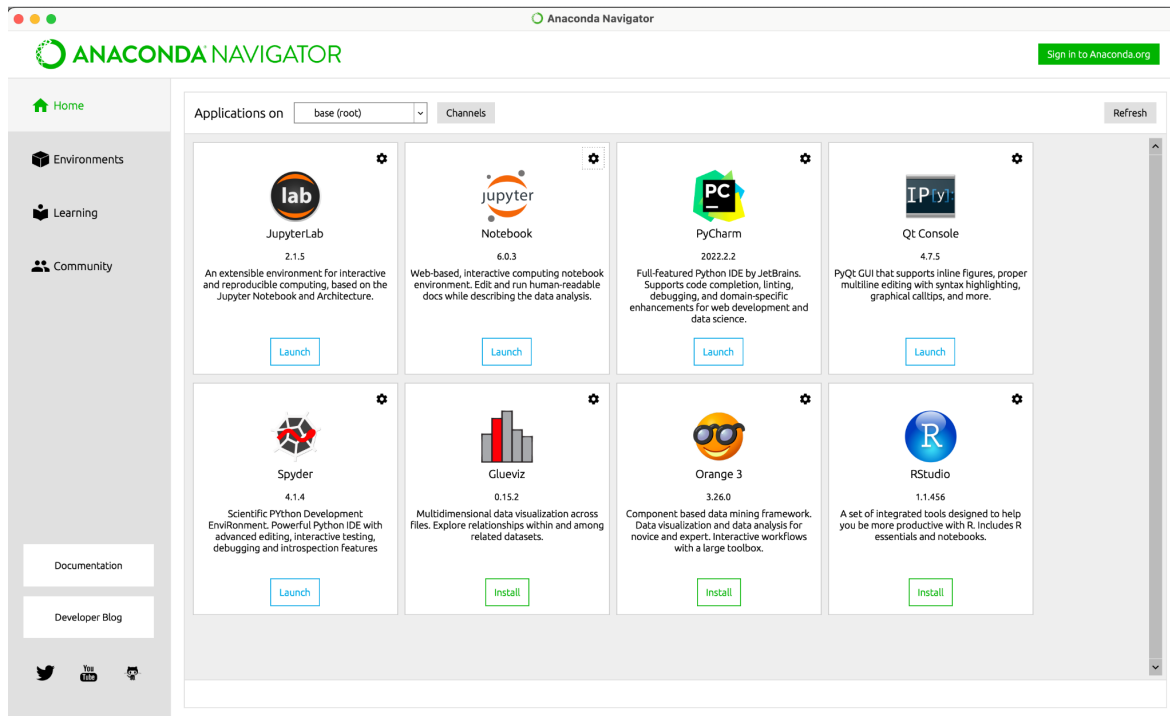

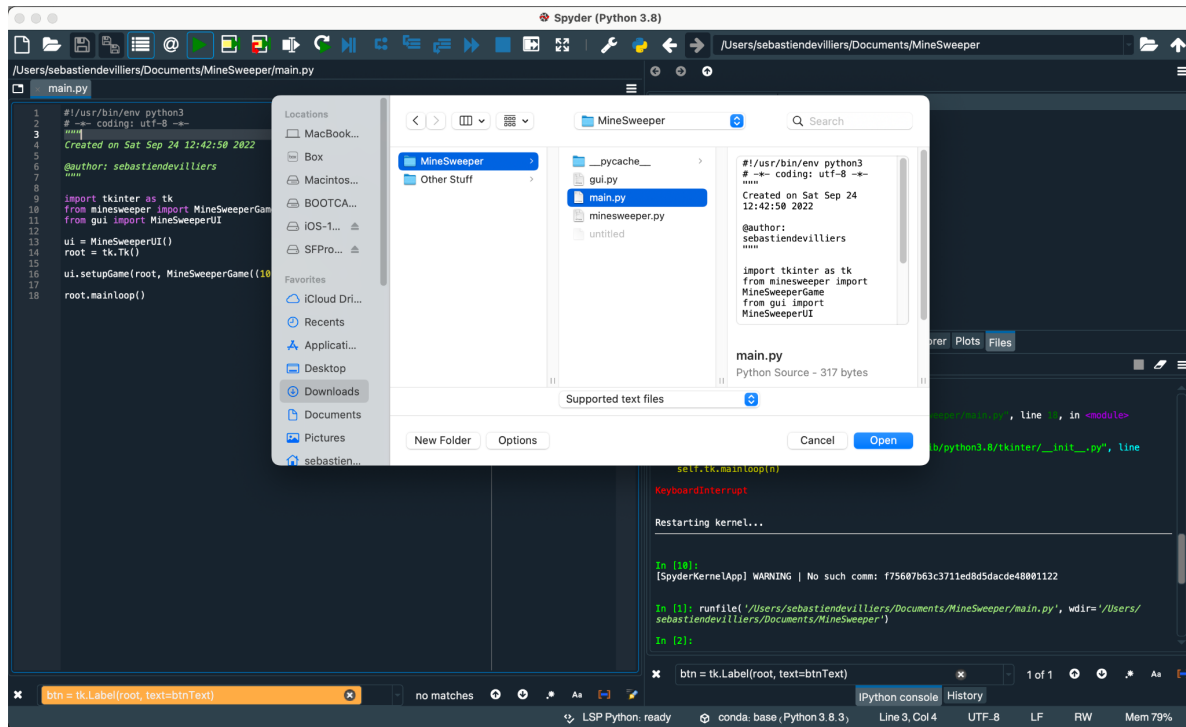

1. Download and install Anaconda Navigator
   a. https://anaconda.org/anaconda/anaconda-navigator
   b. https://docs.anaconda.com/anaconda/install/

2. Launch Spyder

3. Download the entire Minesweeper folder, unzip it, and then open main.py in Spyder
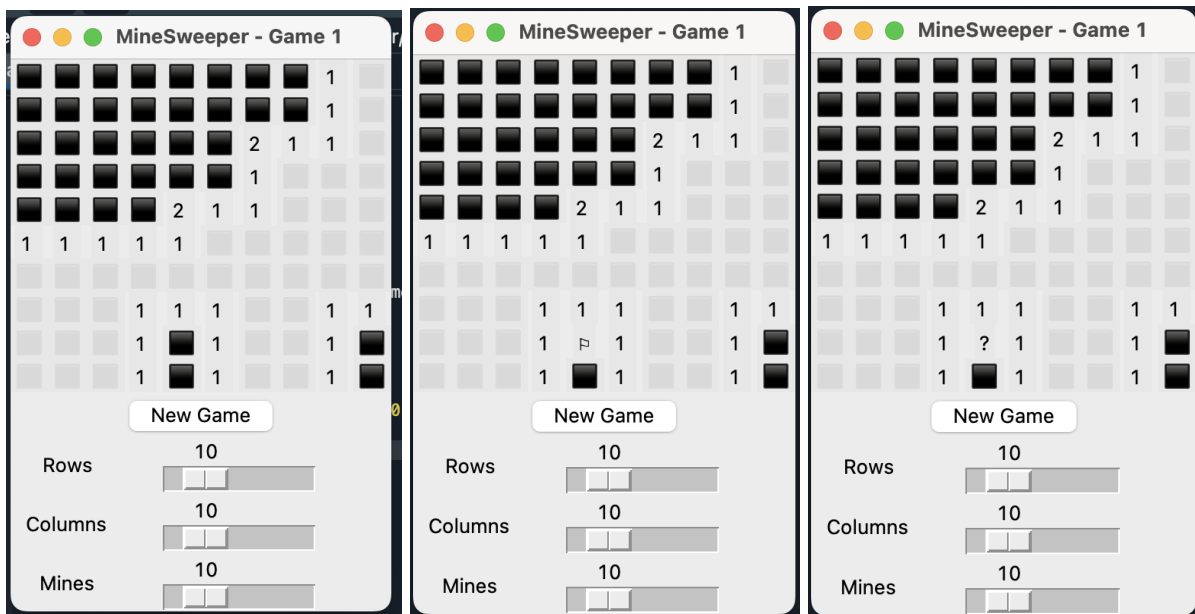

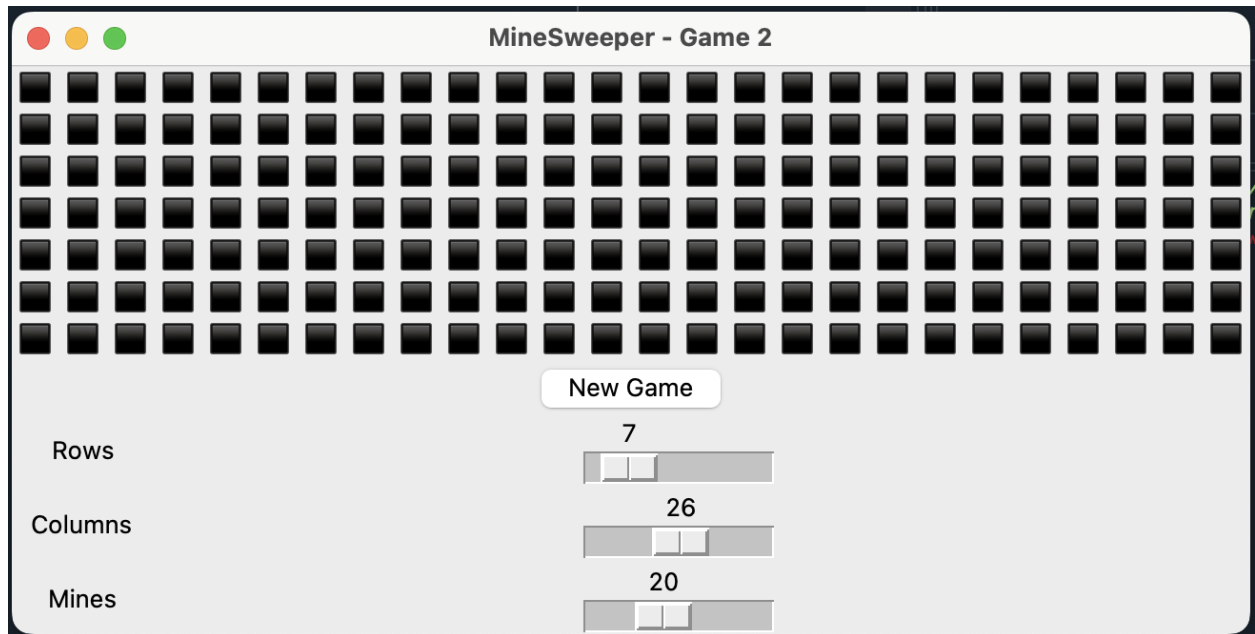

4. Hit the play button to run the program

5. Another window should be created with the minesweeper game running in it
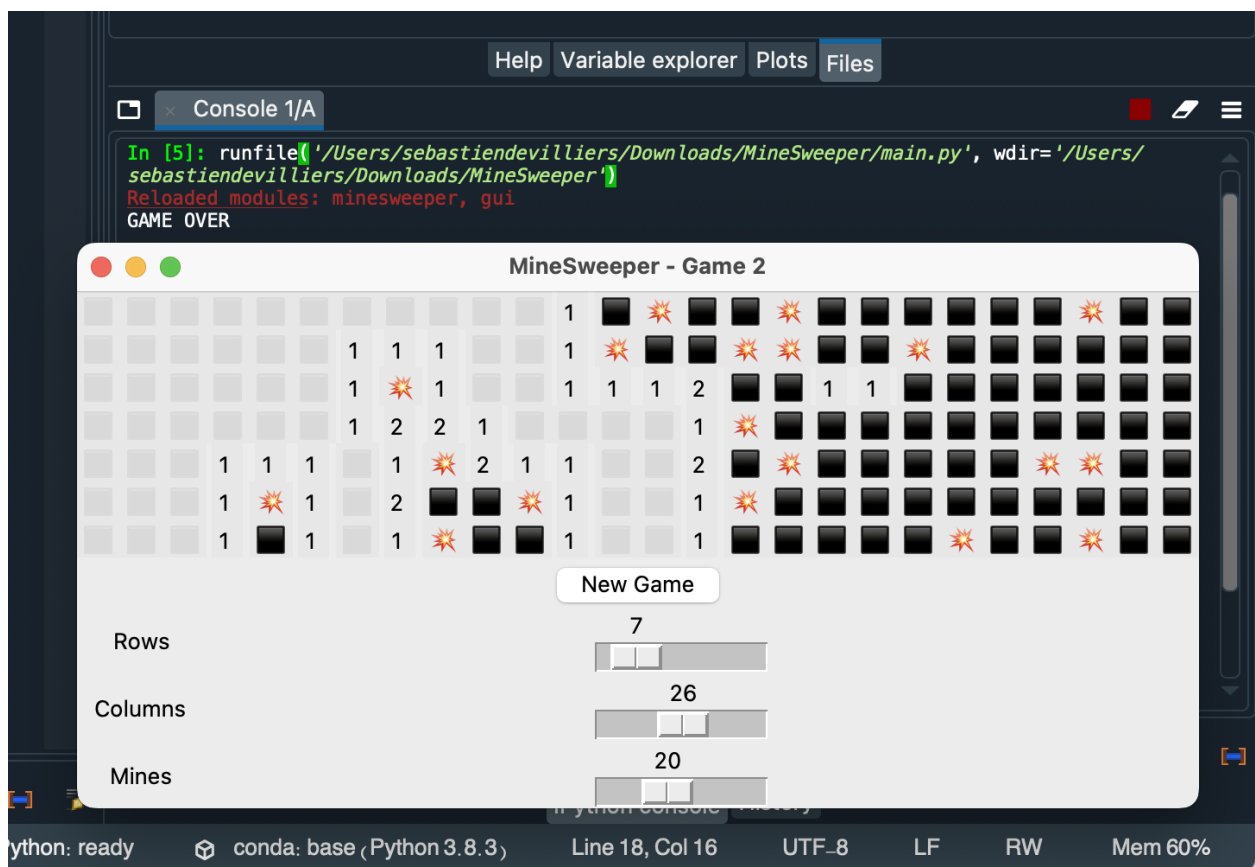

6. Left click to uncover a square, right click to flag it as a mine and right click again to mark as unknown

7. Use the sliders to change how many rows, columns, and mines you want in order to adjust the difficulty. Then click 'New Game'

8. Don't click on the mines!

9. You win the game when you have cleared all non-mine squares

```
In [5]: runfile('/Users/seba            /main.py', wdir='/Users/
sebastiendevilliers/Downloa
Reloaded modules: minesweep
